

How your Living Pod comes to Life

A simple, guided process from first conversation to final handover.

1. Discovery Consultation

We discuss your vision, site, budget, and goals for the project.

2. Site Assessment & Pod Positioning

Assess your site, confirm access requirements, and determine the ideal location for your Living Pod.

3. Secure Your Living Pod

Confirm your design, inclusions, pricing, and project timeline to commence your build.

4. Planning & PIM Approval

Our architectural team prepares and submits your Project Information Memorandum (PIM) application, managing the process with your local council on your behalf.

5. Site-Specific Design & Building Consent

Once your PIM is approved and the geotechnical report is complete, site-specific engineering and architectural documentation are finalised before your Building Consent application is submitted to BCAL.

6. Construction & Site Preparation

Your Living Pod is expertly crafted in our workshop while site preparation, foundations, and service connections are completed in readiness for delivery.

7. Delivery, Installation & Handover

Your Living Pod is delivered, installed, connected, and undergoes final inspections before the Code Compliance Certificate is issued and the keys are handed over.

How your Living Pod comes to Life

What we do for you.

- Site assessment & Living Pod placement
- Council liaison
- PIM application
- Geotechnical investigations
- Engineering & site-specific design
- Building consent
- BCAL inspections
- Transport logistics
- Installation & commissioning
